ABSTRACT

LOW-COST AUTOMATION OF GRAM'S MICROBIOLOGY STAINING PROCEDURE

Dr. rer. nat. Maruli Pandjaitan, Thesis Advisor

Ir. Arko, Ph.D, Thesis Co-Advisor

Gram stain is a differential stain which distinguishes bacteria into 2 large groups; Gram-negative and Gram-positive. Similar to other staining methods, Gram stain is purposed to make the morphology and arrangement of cells more visible during investigation. Moreover, the differentiation ability of Gram stain makes it the most essential and valuable microbiological staining procedure available. However, the procedure of Gram stain involves waiting phases and takes reasonable time. The main objective of this thesis is to design and construct a low-cost automatic apparatus to perform Gram staining. This thesis is significant while most hospitals in Indonesia are still performing Gram stain manually and thus, it is not time-, cost- and labor-efficient. Optimistically, the proposed thesis device would increase laboratory efficiency while cutting the cost, as well as raising patients throughput and in turn, profit.

Keywords: Gram stain, low-cost, automation

DEDICATION

I dedicate this thesis to my beloved parents and family. Without their supports and encouragement it would have been impossible for me to finish my bachelor study

ACKNOWLEDGMENTS

The author thanks the God for His guidance, blessings and love, so that the author could complete this thesis on time.

During the completion of this thesis, lots of guidance and assistances have been given by many persons. On this occasion, the author wishes to give sincere gratitudes to:

1. Dr.rer.nat. Maruli Pandjaitan, as Thesis Advisor for his encouragement, motivation and personal guidance and advice.
2. Ir. Arko, Ph.D, as Thesis Co-Advisor for his helps in solving many technical problems and constructive comments.
3. Beloved family, who had given the support and encouragement; especially to his father for the great helps that have been given during the completion of this thesis.
4. Jeannie Chandhika, for her support, understanding and accompany especially during difficult moments.
5. Other SGU lecturers, staffs and colleagues who have helped and supported the author during completion of the thesis.
6. Many other persons that have helped the author completing the thesis and are not mentioned.

The author realized and acknowledged that this thesis was far from being perfect. Hence, any comments and critics are welcomed for improvement of this thesis.

In conclusion, the author wishes that this thesis could give benefits and contributions for any academic purposes, readers and general society.

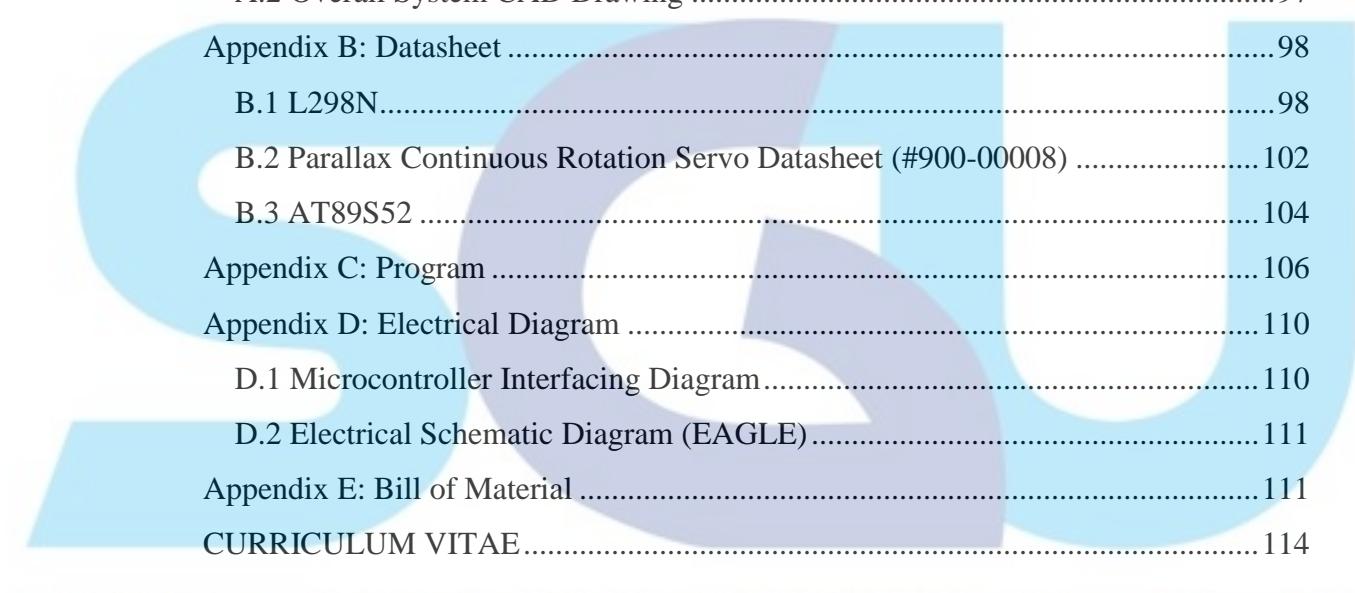

TABLE OF CONTENTS
