#### **ABSTRACT**

## OPTIMIZED PROCESS CONTROL FOR OPERATION, ENERGY, MANAGEMENT, AND MAINTENANCE IN BOILER PLANT USING SCADA

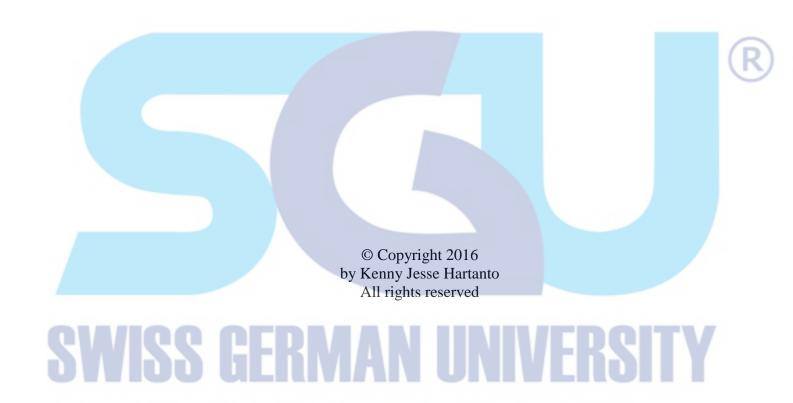

By

Kenny Jesse Hartanto
Dr. Ir. Hanny J. Berchmans, M.T., M.Sc., Advisor
Dena Hendriana, BSc., S.M., Sc.D, Co-Advisor

#### SWISS GERMAN UNIVERSITY

Over the years for high quality, greater efficiency and automated machines has increased in the industrial. Plants require continuous monitoring and inspection at specific time intervals. There are number of possibilities of errors at measuring parameters and various stages involved with human workers and the lack of few features of microcontrollers. This paper attempt to explain the advantages the companies will face by implementing automation into them. The boiler control, which is the most important part of any plant, and its automation, is the precise effort of this paper. In order to automate and minimize human intervention, there is a need to develop a Supervisory Control and Data Acquisition (SCADA) system that used to monitors the plant and helps to reduce the errors caused by humans. While the SCADA is used to monitor all parameter system in plant, Programmable Logic Controller (PLC) is also used for the internal storage of instruction for the implementing function such as programming, sequencing, logic, counting, timing and arithmetic to control through digital or analog I/O modules.

Keywords: Automation, Programmable Logic Controller (PLC), Supervisory Control and Data Acquisition system (SCADA), Boiler.

#### **DEDICATION**

I dedicate this works to all my family members, College friends, lecturers in Swiss German University who have been constant source of motivation, inspiration and support

#### ACKNOWLEDGEMENTS

Praise to the Lord for his grace and guidance that he has given to the authors until the research and writing of thesis entitled OPTIMIZED PROCESS CONTROL FOR OPERATION, ENERGY, MANAGEMENT, AND MAINTENANCE IN BOILER PLANT USING SCADA can be completed on time.

This thesis is prepared as the requirement in completing study of Master Mechanical Engineering – Mechatronics Program in Swiss German University, Tangerang.

This thesis writing cannot be completed without any help from several parties. Therefore, the authors would like to say thank you to:

- 1. Dr. Ir. Gembong Baskoro, M.Sc., as the Dean of Faculty of Engineering and Information Technology in Swiss German University.
- 2. Prof. Ir. Houtman P. Siregar, M.Si., Ph.D. (Alm), as the Acting Head of Master of Mechanical Engineering (Mechatronics) in Swiss German University.
- 3. Dena Hendriana. BSc., M.Sc., Ph.D, as the Deputy Head Of Master of Mechanical Engineering (Mechatronics) in Swiss German University.
- 4. Dr. Ir. Hanny J. Berchmans, M.T., M.Sc., as an advisor who has given a lot of guidance to the authors in writing this thesis.
- 5. Families who have given material and moral support to the authors in completing the thesis writing.
- 6. Friends who have given motivation and feedback to the authors in completing the thesis writing.
- 7. All lecturers in Swiss German University who have given guidance, knowledge, and skill to the authors.
- 8. All parties who have directly or indirectly helped in the preparation of this thesis.

The authors realize that this thesis is not perfect. Thus, the authors expect critics and constructive suggestions from all parties for revision and further improvements.

In the end, the authors want to apologize for every faulty of this thesis. Hopefully this thesis can provide benefits for all readers.
