ABSTRACT

DESIGNING, CONSTRUCTING, MONITORING AND ANALYZING OF FLOOD GATE SYSTEM-MODEL

By

Daniel

SWISS GERMAN UNIVERSITY

Bumi Serpong Damai

Dr.Ir.Tutuko Prajogo, MSMfgE

The purpose of this thesis is to monitor and control the water flow in the river to prevent from overflow that can caused flooding around the river. In this case, the thesis will modelled the real system of a river and flood gate in Jakarta. This model will simulate how the water flows from Katulampa dam, Bogor and then continue to Manggarai until the water flow through the sea. There will be gates at the sea to prevent the high tides from the sea. In this model also the system of flood gate will be controlled and monitored, the water level will be measured by level sensor. The sensors then will send the data to the microcontroller to be processed. All of the information from the sensors and the condition of gates will be sent and displayed through a user friendly HMI (Human Machine Interface). In this HMI, the operator will be able to control and monitor the water level in the river. Although the system is automatic, the operator can also control the operation of flood gate manually through the HMI.

Keywords: Flood Gate, HMI, Level Sensor.

DEDICATION

I dedicate this thesis to God, my mother, my sister, my advisor, my co-advisor and my friends.

ACKNOWLEDGMENTS

First of all, I would like to thank God for His kindness and blessing, so I could finish this thesis work. Without His blessing, this thesis would not be done well.

I also want to thank my advisor, Dr.Ir.Tutuko Prajogo, MSMfgE for his support in doing this thesis. Thanks to his guidance, opinion, motivation, assistance, patient and excellent knowledge which help me more to complete this thesis.

Another appreciation is pointing to my co-advisor, Dr. Rusman Rusyadi B.Eng, MSc for helping me a lot in programming, designing and making an HMI. I also want to thank to Erikson F.S.Sinaga, ST, M.Kom for his help in testing sensor, Mr. Cepi Muhammad Hanafi, ST for his opinion and suggestion about my thesis and also providing facilities and tools and Dipl, -Ing, Maralo Sinaga for helping me in electrical concept and revision of report.

To all my college who help and support me during my thesis although we are not making thesis at the same time. I would give special thanks to Dipl, -Ing, Aris Wissan and Dipl, -Ing, Wong Tung Yuen for helping me in HMI designing and constructing, Dipl, -Ing, William Setiawan, Dipl, -Ing, Yoga Mulyadi and Dipl, -Ing, Ardian Susanto for borrowing tools, Dipl, -Ing, Rhea Valentina for helping me in electrical designing, and also to all my college that I can't mention one by one for their supports.

Last but not least, I would give my special thanks to my parents, sister and girlfriend for their support in everything I have done. Especially for my mother, her support help me a lot in doing this thesis.
