SWISS GERMAN UNIVERSITY

The objective of this thesis work is to develop a planning executing monitoring architecture for a mobile robot which implements the use of fusion sensor and Kinect™ sensor in implementing a dynamic obstacle avoidance algorithm and localization of the mobile robot.

The focus of this work is to design and develop the execution and monitoring module. The monitoring module will provide data that is required by the planning module. The transaction of the data is using serial communication.

Keyword: Planning Execution Monitoring Architecture, Serial Communication, Kinect™ sensor, dynamic obstacle avoidance algorithm

DEDICATION

I dedicate this thesis to God, my parents, my sister, and all of my friends.

ACKNOWLEDGMENTS

The author wishes to God for all of His grace and blessing throughout the entire thesis work.

I wish to express my gratitude to Dr. Ir. Prianggada Indra Tanaya, MME and Erikson Ferry S. Sinaga, ST, M.Kom, Alfredo Yohanes for their help and advice throughout the process of the thesis. Special thanks to Winson Tewira to be my partner in this thesis project, and give me a lot of support.

Many thanks and gratitude to my beloved parents, Djumadi Utomo and Lina Trivita Wijaya, and sister Stephanie Angelina Utomo, who always encouraged and prayed for me, support the financial needs of this thesis and take care of me in every way.

I also wish to thank all my colleagues in Mechatronics Batch 2009. Also all of my best friends, Jean Gabriel Dufresse, William Tjiu, Fani Kurniawan Mista, Sutrisno Citra, Kevin Marcelino, Nicolaus Kevin, Alvin Chandra, Vincent Kok, Anthony Setiawan, Steven Fransisko, Nirmala, for supporting me all the time.

Without all those listed above, this thesis would not have been completed.
