This research advances the study of Fiordelisi & Molyneux (2010) and Radic (2015) by examining the determinants of shareholder value creation in Indonesian listed banks between 2009 and 2014. By incorporating the study of Fu, Lin, and Molyneux (2014), a forward-looking, market-based performance measure is used to assess shareholder value, namely Tobin's Q. This measurement of shareholder value is then used in a panel data analysis as a linear function of various bank-risk, bank-specific, and macroeconomic variables. Efficiency, credit risk, and income diversification are found to be the most important and significant factors in explaining shareholder value creation in Indonesian banking.

Keywords: Shareholder value, Efficiency, Risk-taking, Bank-specific, Indonesian banking.

DEDICATION

This thesis is dedicated to my parents.

ACKNOWLEDGEMENTS

First and foremost, I would like to thank Allah SWT for providing me this opportunity and granting me the capability, strength, and determination to proceed successfully. This thesis appears in its current form due to the assistance and guidance of several people. Therefore, I would like to offer my sincere gratitude to all of them.

Mr. Yosman Bustaman, my thesis advisor. I would like to express my deep gratitude to him for his continuous guidance, warm encouragement, patience, and critical comments throughout the writing process. He is a man of principles and has immense knowledge in general and his subject in particular.

I would also like to extend my gratitude to my family. They have been my pillars of guidance and love in my life. I would not be where I am today without their help and endless support.

Last but not least, to all of my classmates Mita, Amel, Arif, Stefan, Stella, Febrian, Yaga, and Putra (in no particular order). Thank you for always being there for me with a helping hand throughout the writing process. Moreover, I would not have survived four years of college life without them.
