## ABSTRACT

### CONTROLLING WORKING PRESSURE OF PRESSURE RELIEF VALVE BASED ON ARDUINO UNO

By

SWISS GERMAN UNIVERSITY

This thesis purpose to control woking pressure of pressure relief valve which works as a safety excess pressure by using the principles of electric, is being studied system uses electrically working principle. This system will work if presure relief valve failure indicated working pressure exceeds the initial setup. The indications of this tool uses the pressure sensor will read the excess pressure of the system as a primary input to be processed on aduino. After arduino process input from the pressure sensor, the output will activate alm arduino and the indicator light which indicates that the pressure in the hydraulic meish'n'm in trouble, plainly solenoid valve will open in order to dispose of the excess pressure was to the extent of minimum 20 Bar and keeping it constant. Alarm and indicator light will remain until the operator shut off the system. In this system, there are two options that the operator can do when you turn off the system is to activate the emergency button on the hydraulic machine or operator can turn it off by using the android devices that are connected using Bluetooth. This tool uses a control Arduinino Uno, hydraulic pressure sensor, and for connection android device using bluetooth IC 05-HC.

## **DEDICATION**

Thank you Allah SWT for all blessing during my thesis process.  
I dedicate this works for My lovely Parents and my workplace ATMI Cikarang.

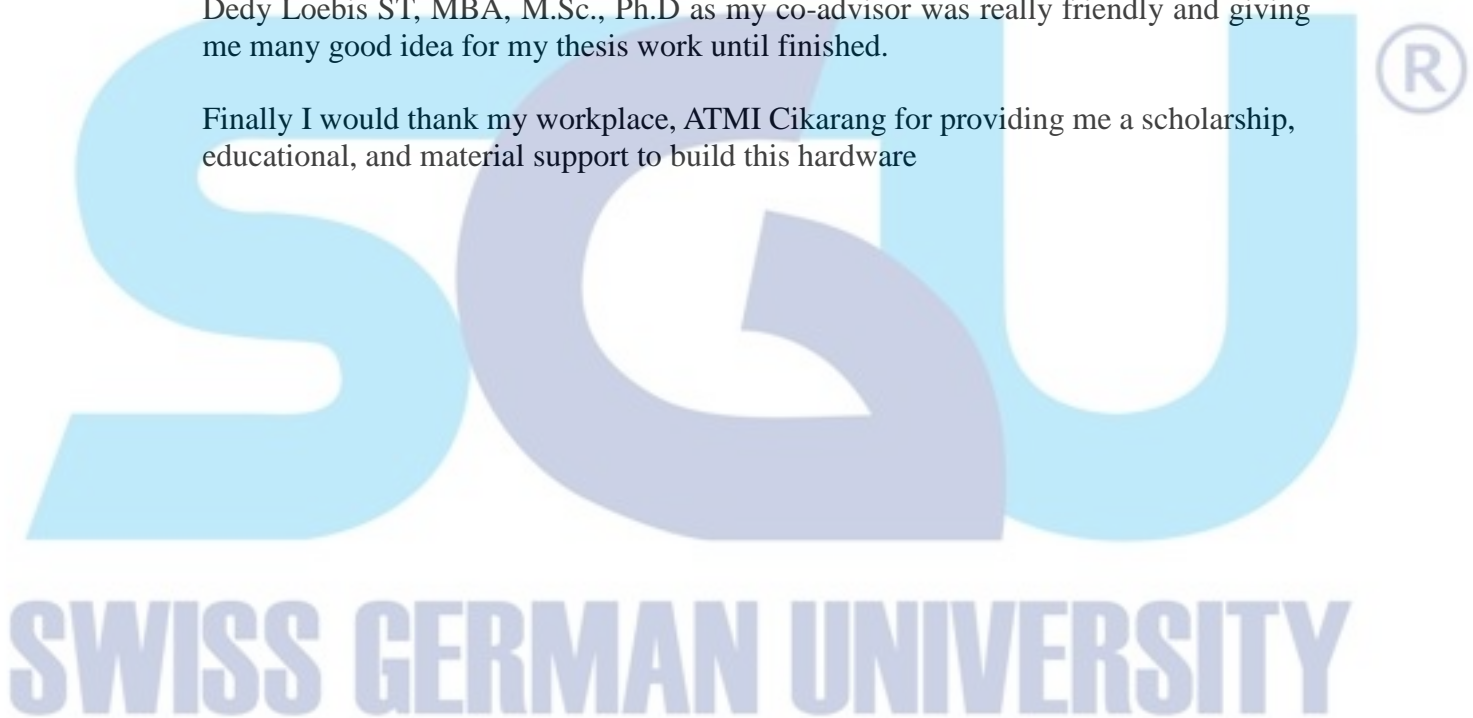

## ACKNOWLEDGEMENTS

First of all, I thank God for giving me this opportunity and once in a lifetime experience to face this really great challenge.

Mr. Ir. Suryo Abadi, M.Sc as my advisor was really friendly and patiently when guide me for all this thesis work from proposal until finished.

Dedy Loebis ST, MBA, M.Sc., Ph.D as my co-advisor was really friendly and giving me many good idea for my thesis work until finished.

Finally I would thank my workplace, ATMI Cikarang for providing me a scholarship, educational, and material support to build this hardware
