ABSTRACT

DESIGNING AND CONSTRUCTING A CAR SIMULATOR CASE: MECHANICAL AND STRUCTURE ANALYSIS

By

SWISS GERMAN UNIVERSITY

Driving simulators have been made to carry out different types of purpose, such as entertainments, driving courses, as well as study human behavior. Also, driving simulators provides safety to the driver compared to driving a real vehicle whether it is cars, ships, or planes. Rather than using real vehicle, the simulators eliminates preparation time and cost for constructing new vehicles for each simulations. The objective of project is to design and construct a full scale car simulator which gives a movement response from the visualization to the driver in real time. This project is carried out in group of four, which are mechanical, electrical, control and communication system. This thesis focuses on designing mechanical structure of a car simulator that has two Degree of Freedom. The actuators are two DC motors and controlled by Arduino microcontroller. First, research and analysis of the car simulator structure have to be done using computer-aided design (CAD) and computer-aided engineering (CAE). After the prototype is constructed, the system is implemented to the structure so that the driving simulator platform can move according to the simulation program.

Keywords: Car/Driving Simulator, Degree of Freedom, Computer-aided engineering, Arduino Microcontroller, Structure Analysis

DEDICATION

I dedicate this thesis work to my families, friends, and for the future of Swiss German University.

ACKNOWLEDGEMENTS

First of all, I would like to thank my family to always have faith and gave support during this thesis development.

I would like to thank Dr. Eka Budiarto as advisor for his guidance and helped coordinates our group project and Leonard Rusli, Ph. D as co-advisor for his useful advices and recommendations regarding the thesis project.

Also, I would like to thank Mr. Cepi Hanafi for permission to use pneumatic and hydraulic laboratory to do our thesis project and gave useful inputs for the thesis work.

Special thanks to Johan Soegiharto, Nicolas Aditya Siswanto and William Irawan that have done our thesis project car simulator as group for their useful information regarding the thesis. Also to Ivana Tjandra who will always be there for me and Charles Logis, Ivan Surya, Samuel Loanka, for encouragement and assisting company. Kevin Susanto and Kevin Tirtaatmadja for their reliable answer through hardest questions. and all my best friends for support and motivation to do my thesis work throughout the semester.

TABLE OF CONTENTS

STATEMENT BY THE AUTHOR	2
ABSTRACT	3
DEDICATION	5
ACKNOWLEDGEMENTS	6
TABLE OF CONTENTS	7
LIST OF FIGURES	10
LIST OF TABLES	15
CHAPTER 1 - INTRODUCTION	16
1.1 Thesis Background	16
1.2 Thesis Purpose.....	18
1.3 Thesis Scope	18
1.4 Thesis Problems.....	18
1.5 Thesis Limitation.....	19
1.6 Thesis Structure	19
CHAPTER 2 - LITERATURE REVIEW	16
2.1 Introduction.....	20
2.2 Driving Simulator	20
2.3 Racing Video Game	22
2.4 Computer-aided Design (CAD).....	24
2.5 Autodesk Inventor.....	25
2.6 Structural Engineering	26
2.6.1 Finite Element Analysis (FEA).....	27
2.6.2 Engineering Deflection	28
2.6.3 von Mises yield Criterion.....	30
2.7 Linear Actuator	31
2.8 Electric Motor	32
2.8.1 DC Motor	33
2.8.2 Wiper Motor.....	33
2.9 Center of Gravity	34
2.10 Torque	35

2.11 Vehicle Dynamics	36
2.12 Existing Motion Based Driving Simulator for Concept Design Comparison.....	37
CHAPTER 3 – METHODOLOGY	42
3.1 System Design Overview	42
3.2 Mechanical Design.....	44
3.2.1 First Conceptual Design.....	45
3.2.1.1 Spring as Support	46
3.2.1.2 Logitech Driving Force GT	47
3.2.1.3 TV Monitor	47
3.2.1.4 Car Seat	48
3.2.2 Second Conceptual Design	49
3.2.3 Final Mechanical Design and Analyses	50
3.2.3.1 Centre of Gravity Analysis	53
3.2.3.2 Force Needed on Maximum Roll Position.....	57
3.2.3.3 Force Needed on Maximum Pitch Position	58
3.2.4 Support Selection – Constant Velocity Joint	59
3.2.5 Actuator Selection.....	61
3.2.5.1 Actuator Design	62
3.2.5.2 Motor Torque Calculation.....	63
3.2.6 Material Selection	65
3.2.7 Shear Stress Allowance for Bolt	68
CHAPTER 4 – RESULTS AND DISCUSSIONS	71
4.1 Result Overview.....	71
4.2 Mechanical Construction	72
4.3 Stress Analysis Result.....	78
4.3.1 Main Platform Stress Analysis.....	78
4.3.2 Base Platform Stress Analysis	81
4.3.3 Connecting Plate Stress Analysis.....	82
4.4 Motor Performance Testing	86
4.4.1 Performance Test with 92 kg User.....	89
4.4.1.1 Pitch Max to Min (92 kg).....	89

4.4.1.2 Pitch Min to Max (92 kg).....	90
4.4.1.3 Roll Left to Right (92 kg)	91
4.4.1.4 Roll Right to Left (92 kg)	92
4.4.1.5 Motor Speed Calculation for 92 kg User	93
4.4.2 Performance Test with 55 kg User.....	94
4.4.2.1 Pitch Max to Min (55 kg).....	94
4.4.2.2 Pitch Min to Max (55 kg).....	95
4.4.2.3 Roll Left to Right (55 kg)	96
4.4.2.4 Roll Right to Left (55 kg)	97
4.4.2.5 Motor Speed Calculation for 55 kg User	98
4.4.3 Performance Test with 72 kg User.....	99
4.4.3.1 Pitch Max to Min (72 kg).....	99
4.4.3.2 Pitch Min to Max (72 kg).....	100
4.4.3.3 Roll Left to Right (72 kg)	101
4.4.3.4 Roll Right to Left (72 kg)	102
4.4.3.5 Motor Speed Calculation for 72 kg User	103
