## ABSTRACT

### DEVELOPMENT OF CLOUD COMPUTING ALGORITHM FOR ARRHYTHMIA DETECTION AND HEART DISEASES

By

Samuel Andrew Setiawan  
Aulia Arif Iskandar, S.T., M.T., Advisor  
Muhammad Fathony, Ph.D, Co-Advisor

SWISS GERMAN UNIVERSITY

Cardiovascular disease in Indonesia has become one of the leading causes of death after complications from stroke and diabetes. Therefore, early detection of heart disease is important. Heart abnormalities can be detected using an electrocardiogram device. General electrocardiogram limits the patient's mobility due to being wired with the instrument. The existence of an electrocardiogram with smart devices that can support cardiac arrhythmia detection is an innovation expected to improve patient comfort. The purpose of this study is to apply telecardiology that can be used for detecting cardiac abnormalities and to classify electrocardiogram data via cloud computing. In this research, we use a dedicated server after it was proven to be able to run in localhost and Node JS as the runtime-environment for running the application. The test datasets that has been chosen are from MIT-BIH Arrhythmia and Normal Sinus Rhythm Database for the Heart Rate Variability parameters to be extracted which are average heart rate, standard deviation of average heart rate and root mean square of the average heart rate. Using linear regression method and testing with 95% confidence interval, it is found that there are significant correlation between heart rate variability increase and cardiac arrhythmia case where the value of the standard deviation of average heart rate being the most significant ( $P < 0.05$ ). With this technology, it is expected to improve efficiency in proving cardiac arrhythmia and heart disease remotely.

## **DEDICATION**

I dedicate this work for my Mother and Brother.

Be it the last time I am wide awake, let the good in me be the one you take.

## ACKNOWLEDGEMENTS

*“With men this is impossible, but with God all things are possible”*

This thesis work serves as the final report and task in fulfilling the bachelor’s degree program requirement in Biomedical Engineering study program in Swiss German University.

Huge appreciation and gratitude I shall express for my thesis advisor, Mr. Aulia Arif Iskandar. For his patience and knowledge help guided me through the thesis work and research by giving his valuable advice and suggestions. Thank you for your patience, guidance, and encouragement.

I am grateful for my co-advisor, Mr. Muhammad Fathony. For he is kind and patient even when I came to him extremely late during advisory but still manages to make time and helped me with the data processing.

For my Mom and Brother who provides for me since the start of my education with food, shelter, supports me to Germany. No amount of knowledge will ever replace this abstract idea of Love and how it transcends Logic.

As for my friends who has helped me throughout the process, in work and in life, Rudolph, Irena, and Joseph. All my love and support to them.

For the lecturers of Biomedical Engineering study program, thank you for opening and widening my horizon and equipping me with the knowledge. And the entire Swiss Germany University staffs for keeping the university running until now, allowing us students to grow despite limitations.

The road has been rough but along the way I found joy and lessons more than what the books can provide.

Sincerely,

Samuel Andrew Setiawan

## TABLE OF CONTENTS

The distribution of HRV parameters between groups (Barauskienė et al., 2016) .....	79
Obtained HRV from AF and Normal sinus data .....	79

## **LIST OF ABBREVIATION**

AF – Atrial Fibrillation

PAC – Premature Atrial Contraction

PVC – Premature Ventricular Contraction

SVT – Supraventricular Tachycardia

VT – Ventricular Tachycardia

CVD – Cardiovascular Disease

HRV – Heart Rate Variability

ANN – Average N-N Interval/ Average Heart Rate (Successive Normal sinus to sinus rhythm)

SDANN – Standard Deviation of Average N-N Interval

rMSSD – Root Mean Square of Successive Difference (Successive Normal sinus to sinus rhythm)

bpm – Beats per Minute

CSV – Comma Separated Values

JSON – JavaScript Object Notation

ECG/EKG – Electrocardiograph / Electrocardiogram

AV Node – Atrioventricular Node

SA Node – Sinoatrial Node

CDN – Content Delivery Network

MIT-BIH – Massachusetts Institute Technology – Beth Israel Hospital

nsrdb – MIT-BIH Normal Sinus Rhythm Database

mitdb - MIT-BIH Arrhythmia Database
