ABSTRACT

ANALYSIS OF ECO-EFFICIENCY AND ECONOMIC OF AN ENERGY CONVERSION PROJECT IN PT. X

By

Rony Sumaryana

SWISS GERMAN UNIVERSITY

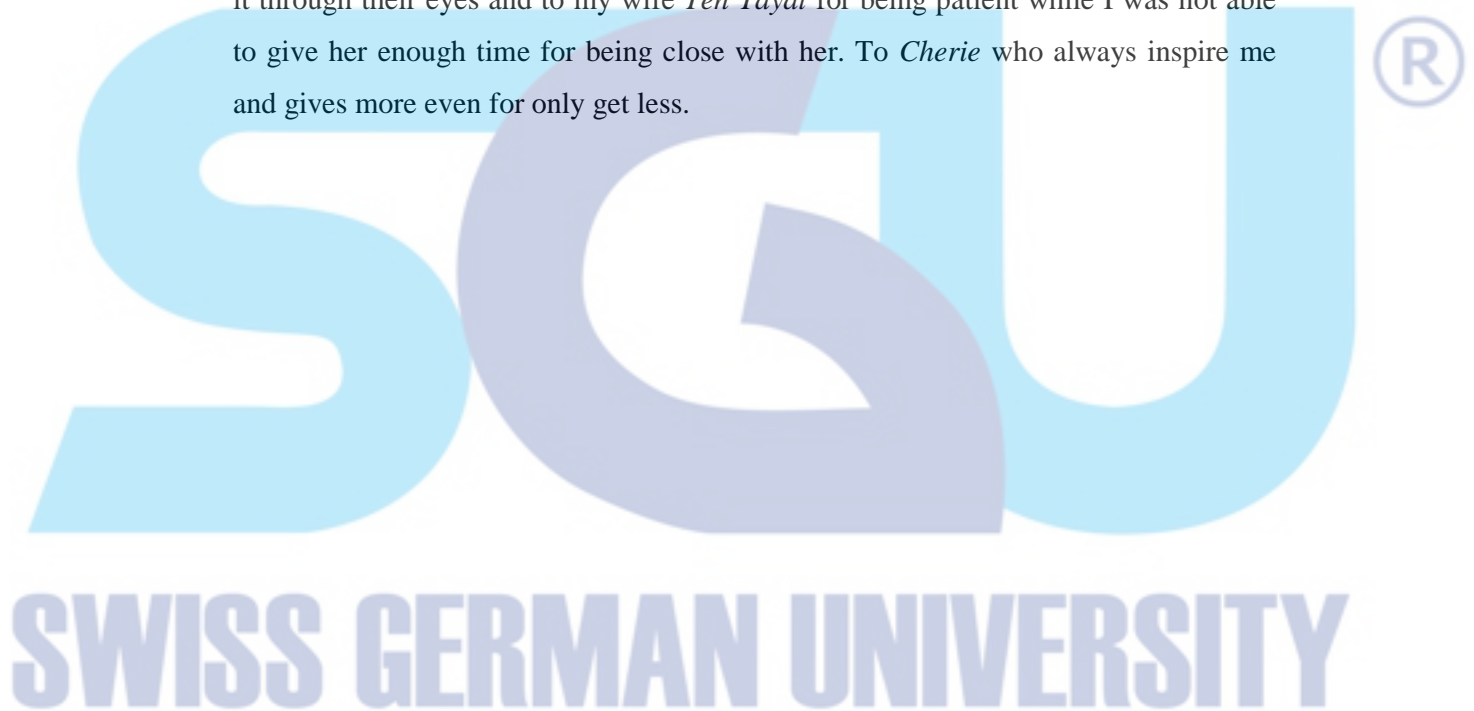

Bumi Serpong Damai

Dr.rer.nat. Linus Pasasa, Thesis advisor

The purposes of this study are two folds. The first is to evaluate effectiveness of company investment to energy conversion project from fuel oil and LPG into Natural Gas (NG) in PT. X. The second purpose is to evaluate the impact of energy conversion to environment which was not included in the project proposal. Net Present Value (NPV), Internal Rate of Return (IRR) and Payback Period (PP) are used as investment appraisal tools with sensitivity evaluation such as appraisal on fuel price and production rate changes. Eco-efficiency which represents the impact to environment is calculated by comparing product's value over load to environment. Product's value is represented by product volume and load to environment is represented by CO₂ emission. Non-Product Output (NPO) analysis method was used to identify the non-product output by value and volume. By using 31.8 % production rate, the calculation was resulted at NPV is equal to 0, IRR 18 % and PP 5 years, while at 100 % production rate the NPV is USD 1,536 million, IRR 102 % and PP 1 year. Therefore the investment is effective when production rate is 31.8 % or higher. Eco-efficiency is decreased from 4.76 to 4.69 or equal to 1.47 % which caused by increasing of carbon dioxide emission. The analysis show that energy consumption of natural gas for each metric ton product (1.91 MMBTU/MT) is almost 23 % higher than energy consumption from fuel oil plus LPG (1.47 MMBTU/MT). This eco-efficiency reduction does not meet the expectation so it is recommended to conduct further evaluation such as root-cause analysis.

DEDICATION

I dedicate this thesis to my father -who already in heaven- and my mother for their never ending struggle in their whole life just to keep me alive and do the better things. To my lovely children : *Niza*, *Aria* and *Rafi* for keeping me the spirit even only giving it through their eyes and to my wife *Teh Yayat* for being patient while I was not able to give her enough time for being close with her. To *Cherie* who always inspire me and gives more even for only get less.

ACKNOWLEDGMENTS

The author wishes to be able to give the best contribution for the readers, especially to the company who has supported the study at Swiss German University (SGU) Bumi Serpong, Indonesia. It is realized this is not an easy task to complete the thesis without any helps from others.

I would like to deliver my appreciation to my advisor Dr.rer.nat.Linus Pasasa who has given lecturer and his assistance to be able to complete this thesis. His valuable inputs and correction is the major factor to keep the thesis writing in the right direction.

To my colleagues in the company, Hendarto, Suganda, Marindo, Erwin, Safrudin and Yano who has given their contribution to get all the information related to the research subject, so this will not be happened without you all. Many thanks to Pak Izhar and Pak H. J Schill who have given me the opportunity to study in SGU and to motivate me for getting the best result that I should achieve.

Finally, to my SGU colleagues in MBA Batch #11 who keep supporting me even you also have your own difficulties : Luthfi, Greg, Tresna, Firman, Oepoyo, Budi, Steven, Shen, Deepti, Arini and Christine; I wish the best for you all.

TABLE OF CONTENTS

STATEMENT BY THE AUTHOR.....	2
ABSTRACT.....	3
DEDICATION.....	4
ACKNOWLEDGMENTS	5
CHAPTER 1 - INTRODUCTION.....	11
1.1. Background.....	11
1.1.1. Energy Sources Overview.....	11
1.1.2. Global Warming Issues Related to Energy Consumption	14
1.2 Eco-efficiency Management Strategy.....	16
1.3 Company Profile of PT. X	17
1.3.1. Organization Chart.....	18
1.3.2. Process Flow Diagram	19
1.4 Problem Description	22
1.5 Thesis Structure	24
CHAPTER 2 - LITERATURE REVIEW	26
2.1 Energy Outlook.....	26
2.1.1. Oil Price Increase and Declining of Oil Reserve.....	26
2.1.2. Natural Gas as Alternative Energy	28
2.2 Eco-efficiency	30
2.3 Cleaner Production as Tool-Box of Eco-efficiency in PT. X.....	33
2.4 Global Warming Projection.....	33
2.5 Effect of Radiative Forcing Components	35
2.6 Industry Contribution to Global Greenhouse Gas Emission.....	36
2.7 Future Emission Prediction.....	37
2.8 Potential Impact of Climate Change on Markets.....	38
2.8.1. Industry	38
2.8.2. Energy Sector.....	39
2.8.3. Agriculture and Forestry	39
2.8.4. Construction and Associated Industry	40
2.9 Strategy to Address Climate Change.....	40
2.10 Kyoto Protocol and Measures to Achieve GHGs Reduction.....	41
CHAPTER 3 - METHODOLOGY	43
3.1 Thesis Objectives.....	43
3.2 Contribution to Knowledge.....	43
3.3 Research Design and Methodology	44
3.3.1 Net Present Value (NPV).....	44
3.3.2 Internal Rate of Return (IRR)	44
3.3.3 Payback Period (PP)	45
3.3.4 Sensitivity Analysis	45

3.3.5	NPO Analysis Framework	46
3.3.6	Greenhouse Gases Emission Indicator.....	47
3.3.7	Eco-efficiency Measurement	48
3.4	Research Question	49
3.5	Hypothesis.....	49
CHAPTER 4 - RESULT AND DISCUSSION.....		51
4.1	Review of Project Proposal Summary	51
4.2	Project Analysis Based on Actual Condition After Implementation	51
4.2.1	Fuel Oil plus LPG Energy Consumption	51
4.2.2	Natural Gas Energy Consumption	53
4.2.3	Actual Cost Saving After Project Implementation	54
4.2.4	NPV, IRR and PP Summary After Project Implementation	55
4.2.5	Sensitivity of NPV and IRR to Production Rate.....	58
4.2.6	NPV at Different Discount Rate	58
4.2.7	NPV and IRR at Different Tax Rate	59
4.2.8	Sensitivity of NPV and IRR to Fuel Oil Price	60
4.2.9	Sensitivity of NPV and IRR to Natural Gas Price	62
4.2.10	Test Case at The Worst Probable Multiple Change Condition.....	64
4.3	Non-Product Output (NPO) Analysis Chart	65
4.3.1	NPO Analysis Summary Before Project Implementation.	66
4.3.2	NPO Analysis Summary After Project Implementation.	69
4.4	Eco-efficiency Before and After Project Implementation	72
CHAPTER 5 – CONCLUSION AND RECOMMENDATION		74
5.1	Research Conclusion.....	74
5.2	Recommendation	76
