ABSTRACT

Applying Cluster analysis on SOT Oil and Gas Production Data

By

Uma Bala Devarakonda
Dr. Ir. Mohammad A. Amin Soetomo, M.Sc.
Dr. Harya Widiputra

SWISS GERMAN UNIVERISTY

SKK Migas has implemented SOT (Sistem Operasi Terpadu) to allow SKK Migas system to retrieve specific information from PSC Contractor data source within an integrated online system. It is expected that by the completion of SOT program, there can be huge transactional data that is exchanged on daily basis, and without Data Mining it will be extremely difficult to perform any data analysis. The main purpose of this research is to find out if we can apply clustering technique on SOT production data collected over a period of time. The entire process of the data mining analysis has been carried out using the CRISP-DM methodology. This research found out that it is possible to find certain interesting clusters applying clustering algorithm on the production data. These clusters can be interpreted as clusters of PSC contractors/oil fields/wells clustered based on their various efficiency ratios.

Keywords: Clustering, Data mining, SOT production data, Efficiency ratio, CRISP-DM.

SWISS GERMAN UNIVERSITY

ACKNOWLEDGEMENTS

This research would not be possible without the help of my lecturers and my beloved colleagues.

It gives me a great pleasure to thank our mentor Dr. Ir. Moh. A. Amin Soetomo, MSc, Head of MIT, Swiss German University, to be with us throughout this research and provide us with valuable inputs as and when needed. I am also thankful to our Co mentors Dr Harya Widiputra, MSc and Alva Erwin, MSc who have provided us great support, constant guidance, personal attention, suggestions and endless encouragement with their expertise in the field of data mining.

I would also thank Dr Riri Satria, for being so patient and helping us in penning down our thoughts in a more systematic manner.

The entire data analysis would not have been possible without the support and participation of Center for Information System team at SKK Migas. It was a delight working with the team.

Special thanks to RapidMiner team, the tool which has become the backbone of this entire research and also the entire team at Swiss German University that has helped me during my course time at the university.

Last but definitely not least I would like thank my two colleagues Bobby Suryajaya and Frieda Putri Aryani for all the endless discussions and Thursday lunches we had together. It has been great experience working with you both.

Special mention about our Subject Matter Expert Bobby Suryajaya, for this research was his brain child on which I worked to develop it in to a model.

Sincerely

Uma Bala Devarakonda
