SWISS GERMAN UNIVERSITY

This research based on the case study in PT. XYZ, is addressed how to optimize the mechanical assembly line by rebalancing the line in order to reduce bottleneck and idle time, increase line efficiency and also reduce the unnecessary movement that occur when operators want to pick up the parts, by doing this hopefully mechanical line can reach production target and PT.XYZ can fullfil the customer's demand. Based on observation the company want to produce a new type of vehicle and want to increase throughput from 8 to 10 vehicle per day. Therefore, in this research line balancing problem is solved using teoritical approaches to find the best solution by distributing work element or tasks of workstation so that the number of workstation or operator can be optimized. The methods are The Largest Candidate Rule and Rank Positional Weight, also this thesis want to reduce waste of motion by doing the trolley part arrangement and make a gravity rack to replace the current STP trolley. The analysis problem is begin with time study. Those methods are compared then translated to system modeling simulation using tecnomatix plant simulation as the result of this thesis

Keywords: Line Balancing, Assembly Line, Bottleneck, The Lagest Candidate Rules, Ranked Positional Weight

DEDICATION

I dedicate this thesis to my parents I Made Nasa and Fenny Nansie for their unconditional love. To my family for their support to my lectures for their advices, support and guidance To my friends for their support and motivation, To myself who put my best on this thesis And my future.

ACKNOWLEDGEMENTS

First of all, the author would like to express my biggest gratitude to Tuhan Yesus who never tired of hearing my prayers and help me with His mighty power to my obstacles on the process of making this thesis. Without His grace, the author will never be able to finish this thesis.

Special thanks to my parents, I Made Nasa and FennyNansie, and my brother, for giving me support and always encourage me with their best wishes.

I want to thank my parents and my family for their support, reminder, and unconditional love that helps me through my tough times while doing this thesis.

The author owes the deepest gratitude to Dr.Tanika Dewi Sofianti,ST.,MT, and Ir. Setijo Awibowo,MM, as advisor and co-advisor that is always be there for the author and relentlessly helping, guiding, motivating and mentoring from the start until the completion of this thesis project.

The author would like to thank PT XYZ for having me during this thesis work. To all the supervisor and all the co-worker within the company that providing every data and information needed for the completion of this project.

Last but not least, the same gratitude is given to fellow batch 2013 of Swiss German University colleagues, all the Industrial Engineering 2013. Thanks for the unforgettable and funny memories in four years. You guys are always in my heart.

TABLE OF CONTENTS

	Page
STATEMENT BY THE AUTHOR	2
ABSTRACT	3
DEDICATION	5
ACKNOWLEDGEMENTS	6
TABLE OF CONTENTS	7
LIST OF FIGURES	10
LIST OF TABLES	11
CHAPTER 1 - INTRODUCTION	12
1.1. Background	12
1.2. Research Problems	14
1.3. Research Objectives	14
1.4. Significant of study	15
1.5. Scope and Limitation	15
1.6. Thesis Structure	15
CHAPTER 2 - LITERATURE REVIEW	17
2.1. Definition and Parameters	17
2.2. Work Measurement	20
2.3. Time study	21
2.4. Stop Watch Procedure	21
2.5. Assembly Line	22
2.5.1. Theory	22
2.5.2. Type of Assembly Line	22
2.6. Line Balancing	23
2.6.1. Theory	23
2.6.2. Assembly Line Balancing Problems	25
2.6.3. Line Balancing Objective	29
2.6.4. Line Balancing Method	31
2.7. Lean Production	31
2.8. Manufacturing Plant Simulation	35
2.9. Tecnomatix	37
2.9.1. Tecnomatix Plant Simulation	37

CHAPTER 3 - RESEARCH METHODOLOGY	40
3.1. Research Methodology	40
3.2. Problem Identification	41
3.2.1. Direct Observation	41
3.2.2. Analyze The Problem	41
3.2.3. Product Description	42
3.2.4. Line Production Process	43
3.2.5. Line Performance Evaluation	44
3.3. Literature Review	46
3.4. Data Aquisition	46
3.5. Time Study	46
3.6. Line Balancing	47
3.6.1. Create Precedence Diagram	48
3.6.2. Line Balancing Method	48
3.6.2.1. The Largest Candidate Rule	48
3.6.2.2. Ranked Positional Weight (RPW)	49
3.7. Simulation	49
3.8. Data Analysis, Result and Discussion	50
3.9. Concluding Remark	51
CHAPTER 4 - CHAPTER 4 – LINE BALANCING AND ANALYSIS	52
4.1. Data Collection	52
4.1.1. General Data Company	52
4.1.2. Working Time	53
4.1.3. Process Time	53
4.1.4. Man Power	55
4.1.5. Work Distribution	56
4.1.6. Result Time Study	59
4.2. Current State Analysis	61
4.2.1. Initial Line Performance Analysis	62
4.3. Result of Line Balancing	67
4.3.1. Line Balancing Using The largest Candidate Rules	69
4.3.2. Ranked Positional Weight (RPW)	78
4.4. Tooling Management	87
4.4.1. Initial Condition	87
4.4.2. Improvement Idea	89
4.5. Simulation	91

4.5.1. Model Validation.....	91
CHAPTER 5 - CONCLUSIONS AND RECCOMENDATIONS.....	93
5.1. Conclusions.....	93
5.2. Recommendations.....	94
GLOSSARY.....	95
REFERENCES	96
APPENDIX A-DATA TAKING.....	98
APPENDIX B – TECNOMATIX INITIAL.....	104
APPENDIX C – TECNOMATIX IMPROVEMENT	106
APPENDIX D – SNAPSHOT FORM AND RPW CALCULATION.....	108
CURRICULUM VITAE	111
