Work performance is a crucial component to any company's success. Should a business' work performance decline, the business will suffer. In the case of ABC Hotel Tangerang, specifically in the F&B server population, monthly reports show a lack of achievement in goals, indicating poor performance. Therefore, a need to gain insight on what affects the work performance of servers in ABC Hotel Tangerang arises, hence the purpose of this study. This study is descriptive and quantitative in nature, aimed to discover the impact of personality, motivation and workplace environment towards the servers' work performance. The data will be analysed and measured through a series of descriptive statistics analyses. Based on the results of these analyses, personality, motivation, and workplace environment have a significantly statistical impact towards the work performance of ABC Hotel Tangerang servers. Results show that the independent variables affect the dependent variable by 73.6%.
