## ABSTRACT

### DEVELOPING TOOLS TO INTEGRATE PRODUCTION PLANNING AND INVENTORY CONTROL DATA FOR PACKAGING MANUFACTURER

SWISS GERMAN UNIVERSITY

This company of this research still utilized Microsoft Excel as the main software to process the PPIC data and Google Drive to distribute the data through the organization. There are several problems occurs in the company, many versions of file circulating around the company, double process inputs occur, time waste and inconsistent calculations occur because of too many manual inputs data and formulas, users having difficulties to find the required sheet. The objective is to eliminate many versions of data circulating around the company, eliminate double process input, reduce manual input processes, and ease the way to find the required sheet. This research will discuss the implementation of a web-based application and integrating the production planning and inventory control data. The methodology that is conducted in this thesis to improve data integration is Waterfall Methodology. The requirement phase will elaborate the problem and the expectation from the company. The design phase will be the planning for the implementation. The implementation shows the interface and the formulas inside the file. Black Box testing is conducted in this thesis to test the manual inputs connectivity to the data and the automation inspection. List of new formulas implemented to help the user to maintenance the PPIC file. The current condition and the proposed conditions are compared to see the benefits of implementing the data integration in the result sub-chapter.

*Keywords: Packaging Manufacturer, Production Planning and Inventory Control, Data Integration, Web-Based Application, Waterfall Methodology, Black Box Testing.*

## DEDICATION

I dedicate this thesis to my family, friends, lecturers, advisor, and co-advisor, and myself.

## ACKNOWLEDGEMENTS

I thank the almighty God for his blessings and guidance to me to be able to live happily up to this point.

I also want to thank the people who have supported me.

I want to thank my parents for looking after me, taking care of me, and giving me a lot of happiness.

I want to thank Mrs. Triarti and Mr. Ivan for guiding me in working on this thesis until the last point.

I want to thank to my best-to-best comrades, namely Sutan Simamora, Rachael Cau, Nadya Natalia at Swiss German University for always providing support to me.

I also want to give thanks to my super classmate named Niklas and Rania for always sharing lots of information with the class.

I want to thank Mr. Fransiskus Xaverius Dimas Adrian Brahmantyo for helping me during my life journey at this university from the first semester until graduation. maybe I couldn't get to this point if you didn't help me by explaining all the industrial engineering materials until I fully understood and could get through all of this.

I would like to thank Katrina Angelie Sukardi for always supporting me and cheering me up when I'm feeling down during this thesis project and awakened me to raise my fighting spirit to go all out working on this thesis project.
