ABSTRACT

MACHINE VISION BASED VERTICAL POSITIONING AND CUTTING OF A HARVESTING TOOL

By

Elisabet

Dr. Rusman Rusyadi, Advisor

Dipl.-Phys. Andreas Neubauer, Co-Advisor

SWISS GERMAN UNIVERSITY

Automation of the asparagus harvesting process is encouraged by the substantial rise in demand in Europe and the shortage of seasonal labor. The automation is supposed to be achieved by building a mobile robot that consists of a drive system, 3-Axis SCARA, and a Harvester tool. The Harvester, as the focus of the research, makes use of the analysis conducted on the images taken by a depth camera to obtain information on the surrounding of the targeted asparagus. The tool consists of three stepper motors to drive the z-axis, cutter, and magazine. The integrated and sequential movement of the three axis enables the tool to harvest asparagus. Evaluation on the surrounding is crucial due to the uneven height of the ground, the presence of obstacles, and delicate nature of the asparagus spears. The analysis results are the inputs for the Harvester to decide on the appropriate approach to harvest the targeted asparagus. The performance assessment yields a highly satisfactory results, though further improvement is needed to achieve an industrial standard suitable for customer usage.

Keywords: Agricultural Robotics, Selective Green Asparagus Harvesting, Motion Control, Cascade Control, Image Recognition

DEDICATION

I dedicate this work to the further development of this project.

ACKNOWLEDGEMENTS

First and foremost, I thank Lord Jesus for His blessings and kindness that have led me to where I am at the moment, for the strength He has been giving me throughout the process, for the plans He has for me, and for the wonderful people He put in my life.

To my family for their unwavering prayers, love, and support. Thank you for always believing in me and for showing me that love and perseverance will never fail. Thank you for the constant reminder to see the positive in everything and keep having faith in God's plan.

To Andreas for giving me the opportunity to work on my Bachelor Thesis while also contributing to the on-going project in the company. To my colleagues; Herbert, Dominik, and Roshan. Thank you for the constructive feedback, and for always willing to help and guide me.

To Pak Rusman for being my Advisor. Thank you for the guidance and the support, which helped me to finish my thesis.

To Tasia and Vero, for keeping in touch and always checking in to make sure I am doing great despite the distance and time zone difference. Thank you for being on my side through thick and thin for as long as I can remember. To Calvin, for always being a kind and understanding friend. I appreciate your great help in such a challenging period.

To my comrades for the past four years; Hanzen, CE, Brandon, Dylan, Oliv. Four semesters of online classes, ATMI, a semester abroad, and following offline classes while I am in Germany would be tough without all of you.

I appreciate the people who have been helping me along the way, be it an act of kindness, a kind word of affirmation, or simply a kind presence. Thank you for everything.
