ABSTRACT

DEVELOPMENT OF F1TENTH CAMERA BASED NAVIGATION USING ROS2

By

Hansel Hermawan
Dr. Rusman Rusyadi, B. Eng., M. Sc., Advisor

SWISS GERMAN UNIVERSITY

This project focuses on lane detection in autonomous driving using a camera sensor and ESP32 microcontroller integrated with the ESP-IDF framework. The goal is to accurately identify and track lane markings on the track. The system is further integrated with ROS2, a robotics middleware framework, to enable seamless communication and integration with other ROS2 nodes. Camera sensors are widely used in autonomous driving due to their affordability and versatility. By leveraging computer vision algorithms, the system performs real-time lane detection. The ESP32 microcontroller, running the ESP-IDF framework, interfaces with the camera sensor and performs the lane detection process. Integration with ROS2 allows the lane detection system to exchange data and collaborate with other ROS2-based components, enabling advanced functionalities in autonomous driving. This project provides a cost-effective and scalable solution for lane detection in autonomous driving. The combination of camera, ESP32 IDF, and ROS2 integration offers a powerful platform for developing autonomous driving systems.

Keywords: ESP32 IDF, Autonomous Driving Car, ROS2, Lane Detection, Camera Sensor.

DEDICATION

I dedicate this works for God, my families, advisor, friends, lecturers,
and the future of the country, Indonesia as well as
the development of technology in Mechatronics field of study.

ACKNOWLEDGEMENTS

First and foremost, I want to thank God for giving me wisdom throughout working on this project.

I would like to thank Dr. Rusman Rusyadi, B. Eng., M. Sc. for his guidance while I was working on this project. His patience in guiding made me even more inspired to keep going.

I would also like to thank my parents and my families for supporting me endlessly in working on this project. No matter how difficult the situation is, they always strengthen me to keep fighting and not give up.

In addition, I also would like to thank all my friends, lecturers, and SGU staff for their guidance from the beginning of the first year of entering college and for supporting and helping me until the project was finished.

TABLE OF CONTENTS

STATEMENT BY THE AUTHOR	2
ABSTRACT	3
DEDICATION	5
ACKNOWLEDGEMENTS	6
TABLE OF CONTENTS	7
LIST OF FIGURES	9
LIST OF TABLES	11
CHAPTER 1 - INTRODUCTION	12
1.1 Background	12
1.2 Research Problems	13
1.3 Research Objectives	13
1.4 Significance of Study	13
1.5 Research Question	14
1.6 Hypothesis	14
CHAPTER 2 - LITERATURE REVIEW	15
2.1 Theoretical Perspectives	15
2.1.1 Basic Concept RC (Radio Controlled) Car	15
2.1.2 Robot Operating System 2 (ROS2)	15
2.1.3 Micro-ROS and ESP-IDF	17
2.1.4 ROS2 Publisher and Subscriber	18
2.1.5 Vision System	19
2.1.6 Electronic Speed Controller (ESC)	20
2.1.7 Steering Servo	20
2.1.8 Odroid XU-4	21
2.1.9 ESP32 Wroom 32D	22
2.1.10 NiMH 7.2V Battery	23
2.1.11 Lane Following Method	24
2.2 Previous Studies	24
CHAPTER 3 – RESEARCH METHODS	26
3.1 System Design	26
3.2 Lane Detection Method	27
3.3 Materials and Equipments	28
3.4 Electrical Schematic	28

3.5 Platform Design	30
3.6 Track Design	35
3.7 Software	36
