ABSTRACT

REDUCING ORDER TIME IN PEAK HOURS AT NANNY'S PAVILLON RESTAURANT BY IMPLEMENTING MOBILE APPLICATION SYSTEM FOR ORDERING

SWISS GERMAN UNIVERSITY

Nanny's Pavillon has a problem in peak hours, which is the long waiting time for ordering system. It causes dissatisfaction for customers that have to wait for a long time. The purpose of this research is to find out whether an information system is able to reduce the ordering time in the restaurant. By using software prototyping methodology, Folet software is created to help the restaurant with the current problem. After that, the software will be tested with User Acceptance Test. To prove the hypothesis, a simulation will be done to check whether an information system is able to solve the problem. After the simulation has been done to 4 samples, the speed multiplier starts from 110.49% up to 431.4%. The formula is created based on from waitress : table ratio. The result proves that the software is able to speed up the ordering process in Nanny's Pavillon restaurant.

Keywords: Restaurant, Software Development

ACKNOWLEDGEMENT

First of all, I would like to thank Jesus Christ that has guided me through everything until now. Also my parents who have been giving motivations, feedbacks, ideas and supports in everything that I do. Especially I would thank Elizabeth Widjaja for cheering me and supporting me in any situations to do this thesis.

I would like to thank my thesis advisor, mr. James Purnama and my thesis co-advisor, mr. Randy Anthony who has willingly helped me throughout this thesis.

Last but not least, I would like to thank all of my friends from IT 2013 class in Swiss German University who has been helpful and supportive for these years.
