ABSTRACT

AUTONOMOUS F1TENTH RACING CAR BASED ON ESP-IDF FREERTOS FIRMWARE

By

Rio Kristian Jordi
Dr. Rusman Rusyadi, B. Eng., M. Sc., Advisor

SWISS GERMAN UNIVERSITY

This thesis project aims to make an autonomous F1Tenth racing car that is able to perform on an indoor track area along with the ability to avoid obstacles on the track. The purpose of this thesis is to make a further development of F1Tenth racing car by utilizing the benefits of ESP-IDF FreeRTOS firmware. LIDAR sensor is used as the main sensor that is responsible for taking real time data during the performance. The data that is taken will be computed by Raspberry Pi 400 mini-PC using algorithms like Wall Following and Follow the Gap. The data then transferred to ESP32 as a microcontroller that responsible for making the car move. The microcontroller will send PWM signal to Servo as a steering mechanism and Electronic Speed Controller (ESC) as the motor driver. These combinations of LIDAR and algorithm successfully create a fully autonomous system in the car without any human intervention which can perform well on the track along with its obstacle avoidance ability. In conclusion, ESP-IDF FreeRTOS is a promising platform for building an autonomous car like F1Tenth. It is also easier to work with a microcontroller like ESP32.

Keywords: *F1Tenth, Autonomous Mobile Robot, ROS2, ESP-IDF FreeRTOS, Wall following, Follow the Gap Method*

DEDICATION

I dedicate this work to the future of the country I love, Indonesia and the development of autonomous technology in the Mechatronics field of study.

ACKNOWLEDGEMENTS

First and foremost, I am immensely grateful to my God for providing me with strength, guidance, and inspiration throughout this journey. Your unwavering faith and divine presence have been a source of comfort and motivation, giving me the courage to overcome challenges and pursue this research.

I extend my heartfelt thanks to my advisor, Dr. Rusman Rusyadi, B. Eng., M. Sc., for their invaluable support, guidance, and expertise. Their unwavering commitment, patience, and intellectual insight have been instrumental in shaping the direction of this thesis. I am grateful for their encouragement, constructive feedback, and mentorship, which have greatly enhanced the quality of my work.

I am also indebted to my friends who have been by my side during this academic pursuit. Their encouragement, support, and camaraderie have made this journey more enjoyable and memorable. Their insightful discussions, late-night study sessions, and words of encouragement have been a constant source of motivation.

In addition, I would like to extend my appreciation to my family for their unconditional love, belief in my abilities, and unwavering encouragement. Their constant support and sacrifices have been a driving force behind my academic achievements.

To all those mentioned above, as well as those who may have inadvertently been left out, please accept my heartfelt appreciation. Your contributions have made a significant impact on my academic journey, and I am forever grateful for your presence in my life.
