ABSTRACT

Design and Prototyping of Darrieus Vertical Axis Wind Turbines Using Helical Blade

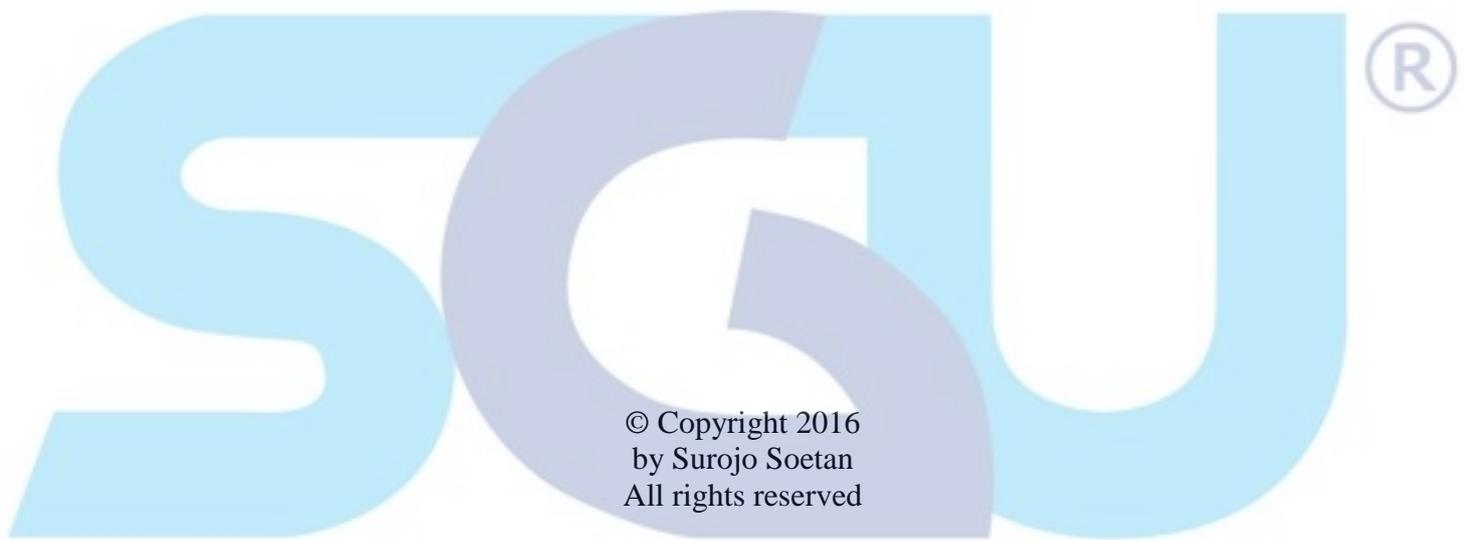

By

Surojo Soetan
Dena Hendriana, M.Sc., Ph.D , Advisor

SWISS GERMAN UNIVERISTY

This paper explains about development of a Darrieus type vertical axis wind turbines with the target to generate 500W. The wind turbines design with software solidworks, optimization using software OpenFOAM and Paraview for viewing the post processing process. With condition of the wind speed around SGU at 4 m/s. The change at the optimization was at the change of length and thickness of the blade design.

Keywords: Vertical Axis Wind Turbines, Small scale wind turbines, Helical Blade, Darrieus, H blade

SWISS GERMAN UNIVERSITY

DEDICATION

This paper is dedicated for the world to keep our planet from using the fossil fuel and to stop the global warming by using renewable and clean energy. Also to my family and friends.

ACKNOWLEDGEMENTS

I would like to thank my advisor, Dena Hendriana, B.Sc., SM, Sc. D who guide me toward this thesis.

Special thanks to Yohanes Fredhi Sangadi Pratomo A.Md. Who help a lot in making the hardware of this thesis. Also thanks to my friends that accompany during the first until the last moment of the thesis Yudian Susanto, Alexander Clements, Muhammad Kemal Ganie, Patrick Wangsa Mulya. Also to Albertus Nagaputra Rumawas for the advice and help when there are trouble.

Also fellow mechatronic friends for the time we have spent together during years in our beloved campus.
