ABSTRACT

MICROCONTROLLER DESIGN FOR AN
OMNIDIRECTIONAL MOBILE ROBOT (SLAM AND EXPLORATION)

By

Prof. Andreas Schwung, Advisor

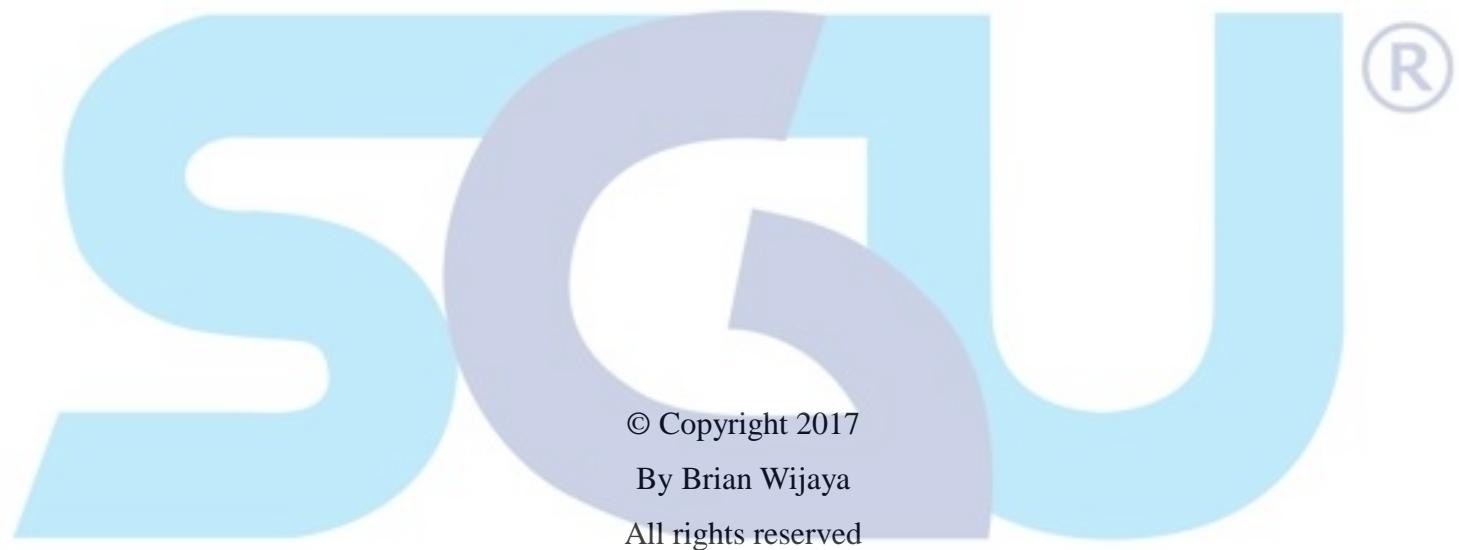

Dr. Rusman Rusyadi, B.Eng, M.Si, Co-Advisor

This paper is particularly intended to create a map through SLAM algorithm, in particular using Hector SLAM and explore the unknown environment using the Hector Exploration node. SLAM is an algorithm that used for creating a virtual map that can be used for environment sensing. Using the *mecanum* wheel or omnidirectional mobile robot where laser scanner sensor is used. RPLIDAR A2 is chosen for the laser scanner due its low-cost price while still producing a good set image of map. ROS framework is used to program for the robot since it provide ready-to-use packages regarding to SLAM. After the map was created, it will be used for dynamic path planning where it can provide the static map for the basic of the dynamic path planning. Through this process a sufficient map is created.

Keywords: SLAM, ROS, Omnidirectional, Mecanum Wheel.

DEDICATION

I dedicated my work for my family, God, SGU, and Indonesia

ACKNOWLEDGEMENTS

I would like to thank God for this opportunity. Furthermore, I would also like to thank my team in Fachhochschule Südwestfalen Soest for their support and patience. Prof. Andreas Schwung and Dr. Rusman Rusyadi, B.Eng, M.Sc thanks for helping and guiding me toward this project. Thanks to Prof. Andreas Schwung for the opportunity to be involved in this project, and the chance to complete my degree in mechatronics. And last but not least my family for keep supporting me throughout this period of time.
