ABSTRACT

A MOTORIZED KNEE EXOSKELETON FOR MUSCLE SUPPORT (CLOSED LOOP SYSTEM)

By

Ivan Komala

Dr. Eka Budiarto, S.T., M.Sc., Advisor

SWISS GERMAN UNIVERSITY

Exoskeletons have already commercially made for human and pets for medical purposes. It helps human on daily activities because the most common purpose of it is enhancing the ability of human to do physical activities such as lifting heavy objects, walking normally for disabled people or even replacing the lost parts. Exoskeletons can help people improving motoric muscle performance. This thesis project is a continuation of previous work on motorized exoskeleton for knee muscle support. The device will be improved to a semi-automatic device with FLC (fuzzy logic controller) with help of some feedbacks from sensors and some switches. The two main advantages of using FLC is the components used do not have to be precise which leads to a cheap sensor and fuzzy logic can solve a system without knowing the system mathematical model.

Keywords: *Exoskeleton, Motorized Knee, Arduino. Fuzzy Logic Controller*

DEDICATION

I dedicate this thesis work to God, my family, advisor, co-advisor and people with disability or weak knee muscles.

ACKNOWLEDGEMENTS

First of all, I want to thank God for all of His Blessings during my work on this thesis.

I would like to thank my parents who is always helping and supporting me in every aspect and my brother and sister for giving me a moral support whenever I start to lose faith in finishing this thesis.

My deep gratitude to my advisor Dr. Eka Budiarto, S.T., M.Sc., who expertly guided me in mechatronics education especially in mathematical modelling and giving an outlook for problems that I may encounter and also Lydia Kidarsa, S.T., Msc. MA(RCA) DIC, my co-advisor who is teaching and helping me a lot in biomechanics.

Thank you to Yohanes Freddy S., A.Md., who has helped me in mechanical problems and designs.

Thank you to my fellow colleague Jeremy Brian Santo, who was also working in the same topic, exoskeleton, for his encouragement and help in problem solving. Also thanks to my friend Victor Tjokrodinata and Patrick Kahardipradja, who has help me working in controllers, programming and electrical problems.

Thank you to Immanuel Michael Budiman, Rynaldi Maydrian Lauren, Calvin Thelma, Kevin Chandra Jaya, Ken Daniswara, Ivan Natanael, Fiansen Juniarsa and Raymond Hartono for helping me in testing and make my campus life more fun.

Lastly, I would like to thank my high school friends Christian Joey, Agra Dewata, Michelle Suhanda and Shella Phinisia, who were always encouraging me whenever I start to feel dispirited and discouraged, without them I could not finish my thesis work.

TABLE OF CONTENTS

STATEMENT BY THE AUTHOR.....	2
ABSTRACT.....	3
DEDICATION.....	5
ACKNOWLEDGEMENTS.....	6
TABLE OF CONTENTS.....	7
LIST OF FIGURES	10
LIST OF TABLES.....	12
CHAPTER 1 - INTRODUCTION.....	13
1.1 Background.....	13
1.2 Thesis Purpose	13
1.3 Thesis Scope	14
1.4 Thesis Objective.....	14
1.5 Problem Identification	14
1.6 Thesis Limitation	14
1.7 Thesis Structure	14
CHAPTER 2 - LITERATURE REVIEW	16
2.1 Gait Cycle and Analysis.....	16
2.2 Stair – Climbing Gait.....	17
2.3 Limit Switch.....	18
2.4 Arduino MEGA 2560	19
2.5 Inertial Measurement Unit - Microelectromechanical System (IMU - MEMs).....	19
2.6 Actuators	20
2.7 Encoder	21
2.8 Fuzzy Logic Controller (FLC)	21
2.9 H-Bridge	26
2.10 Knee Ankle Foot Orthotics (KAFO).....	28
2.11 Proportional Integral Derivative (PID) Controller.....	28
CHAPTER 3 - METHODOLOGY	30
3.1 System Block Diagram	30
3.2 H-Bridge Selection.....	31
3.3 PWM.....	31

3.4	Power Supply	32
3.5	Main Controller.....	33
3.6	Sensor Positioning	35
3.6.1	Encoder Positioning	36
3.6.2	Limit Switch Positioning	36
3.6.3	MEMs Positioning	37
3.7	Lagrangian Approach on Human Gait.....	38
3.8	Torque Calculation on Knee Joint During Walking	39
3.8.1	Torque during initial contact.....	40
3.8.2	Torque during mid-stance	43
3.8.3	Torque during Toe off.....	44
3.9	Torque Calculation on Knee Joint During Stair - Climbing	45
3.10	FLC (Fuzzy Logic Controller)	48
CHAPTER 4 – RESULTS AND DISCUSSION		51
4.1	Motor Testing.....	51
4.2	Sensor Testing.....	52
4.2.1	Rotary Encoder Testing	52
4.2.2	MEMs Testing	53
4.2.3	Limit Switch Testing.....	54
4.2.4	Fuzzy Logic Testing	55
4.3	Encoder Function Range.....	55
4.4	Theoretical Calculation for PWM Range	56
4.5	Fuzzy Logic System Simulation	57
4.6	Electrical Component.....	60
4.7	Final Result	61
