The aim of this paper is to analyze factors that influencing consumer purchase decision of counterfeit products in Indonesia. The study is also aiming to examine the relationship of consumers' attitude towards counterfeit products with purchase decision. This study adopted the descriptive quantitative approach. The result is coming from both primary data which is coming from journals and articles, and secondary data which is coming from questionnaire result. The questionnaire was distributed to 130 respondents and the analysis technique was using Structural Equation Model (SEM) with maximum likelihood estimation. Data processing was done by using SPSS software and SmartPLS. The result from structural model suggests that consumers' decision on purchasing counterfeit products are influenced by status consumption, novelty seeking, personal gratification but integrity does not have any influence on consumers' purchase decision. By having a better understanding of the consumers' decision to purchase counterfeit products, the manufacturers of the original brand company can make better marketing strategies to prevent consumers on making decision to purchase counterfeit products.

Keywords: Status Consumption, Novelty Seeking, Personal Gratification, Attitude, Integrity, Purchase Decision.

DEDICATION
