ABSTRACT

DEVELOPING THE FURNACE AND CONTROLLING THE TEMPERATURE FOR PLASTIC WASTE PYROLYSIS

By

Dean Febrius Chanjaya
Dr. Yunita Umniyati, S.Si., M.Sc., Advisor
Benny Widjaja, S. T., M. T., Co-Advisor

People nowadays start to concern about plastic pollution. Some of them has started to create a machine that able to produce a new energy from plastic waste. Most of them create a pyrolysis machine with heat source from fire. In this thesis, the pyrolysis machine will be different, because the heat source is from electricity with the purpose to be useful in everyday life, easy to operate, and safe. In this thesis, there will be also heat control to prevent too much power consumption if this machine is used in household activities. The control will be using a common controller, which is Arduino and with some help from temperature sensor and solid state relay for optimal results. The discussion will be focused on the mechanical design and electrical design. Common materials will be applied to produce this pyrolysis machine so it is possible for everyone to create it.

Keywords: Pyrolysis, Arduino, Temperature Sensor, Solid State Relay.

DEDICATION

I dedicate this works to God

My Family

My Friends

My University

And for the future of the country I loved : Indonesia

ACKNOWLEDGEMENTS

During this thesis, I have learned to try my best and pushing myself to do better, so I would like to express my gratitude to the following members in no particular order, people who have contributed greatly to the completion of this Thesis.

Firstly, I would like to thank my Thesis Advisor Mrs. Yunita Umniyati for the support and guidance throughout this Thesis. Without her encouragement, I would not be motivated to push myself to keep improving my work. Secondly, I would like to thank my Thesis Co-Advisor, Mr. Benny Widjaja, for all the feedbacks and guidance along the process of this Thesis. Without his expertise, I would not be able to solve some problems that I was facing with. Special thank also to Kristian Nova and Yohanes Freddy for the guidance at Workshop about some problems on this thesis.

Last but not least, I would like to thank my family for the infinity support, their prayers throughout my 4 years of undergraduate study in Swiss German University, and also their sincerity in paying my tuition in this University. I would like to thank my friends to, to all my Teman Gila group, Arie Dwinarko Halim Putra, Eric Santosa, Thomas Tri Putra, Kevin Ocnald, Theodorus Chrisnariyanto, for being my crazy friends for these 4 years. Also for Brewok Study Club, Surriyadi Lolo, Chosua Glen, Geraldus Aldo, Felicia Kristy, Mikael Kevin, Stefanus Michael, Steven Jonathan, Darin Soedarsono, Richard Christophorus, for being my study friends. I do not forget also for my K-Pop friends, Chosua Glen, Kelvin Febianto Galiny, Daniel Dwicahya Hasim, and Leonard Chandra, for the K-Pop intake to reduce my stress during this Thesis. Special thanks for my beloved girlfriend, Vannia Elisha, for the full support. I have a special thank also to Nintendo Switch, for its ability to reduce my stress during this Thesis. I love you all.

Most importantly, all of these would not be possible without God's grace and blessings. To God be the glory!

STATEMENT BY THE AUTHOR	2
ABSTRACT	3
DEDICATION	5
ACKNOWLEDGEMENTS	6
TABLE OF CONTENTS.....	7
LIST OF FIGURES	10
LIST OF TABLES.....	11
CHAPTER 1 - INTRODUCTION	12
1.1. Background.....	12
1.2. Research Problems	14
1.3. Research Objectives	14
1.4. Significance of Study	14
1.5. Research Questions	14
1.6. Hypothesis	15
1.7. Scope	15
1.8. Limitation	15
1.9. Thesis Structure	15
CHAPTER 2 - LITERATURE REVIEW	16
2.1 Pyrolysis.....	16
2.1.1 Slow Pyrolysis.....	17
2.1.2 Flash Pyrolysis	17
2.1.3 Fast Pyrolysis	17
2.2 Pyrolysis Cracking Processes.....	17
2.2.1 Hydro Cracking	18
2.2.2 Thermal Cracking.....	18
2.2.3 Catalytic Cracking	18
2.3 Heat Transfer.....	18
2.4 Law of Thermodynamics	19
2.4.1 The Zeroth Law of Thermodynamics.....	19
2.4.2 The First Law of Thermodynamics	19
2.4.3 The Second Law of Thermodynamics.....	21
2.5 Plastics	21

2.5.1	Polyethylene Terephthalate (PETE or PET)	22
2.5.2	High-Density Polyethylene (HDPE)	23
2.5.3	Polyvinyl Chloride (PVC)	24
2.5.4	Low Density Polyethylene (LDPE)	24
2.5.5	Polypropylene (PP)	25
2.5.6	Polystyrene (PS)	25
2.5.7	Miscellaneous Plastics	26
2.6	Arduino	27
2.6.1	Arduino Uno	27
2.6.2	Arduino Micro	27
2.6.3	Arduino Mega 2560	28
2.7	Solid State Relay	28
2.7.1	Solid State Relay Input	29
2.7.2	Solid State Relay Output	30
2.8	Temperature Sensor	31
2.8.1	Negative Temperature Coefficient (NTC) Thermistor	31
2.8.2	Resistance Temperature Detector (RTD)	32
