#### ABSTRACT

#### BIOMASS PELLETS FROM OIL PALM EMPTY FRUIT BUNCHES (OP-EFB)

By

Rahmat Farhan Aditya Dr. –Ing Evita Herawati Legowo, Advisor Dr. Saptadi Darmawan, S.Hut, M.Si, Co-Advisor

#### SWISS GERMAN UNIVERSITY

Oil Palm growths in Indonesia are getting higher every year. Oil palm plantation produced various waste, including oil palm empty fruit bunches (OP-EFB). 95 % Indonesia energy demand still provided by the fossil fuel and only 5 % provided by renewable energy, which provide opportunity of OP-EFB biomass pellets to be utilized as alternative resource. The research of biomass still low, especially research of OP-EFB biomass pellets. Therefore, the research objectives were to determine the production process of OP-EFB and to define the most effective binder and binder ratio for the biomass pellets. This research experiments consist of shredding, chopping, drying, grinding, and sieving as raw material pretreatment. Also, varying the binder and binder concentration of the mixture between raw materials was the part of this thesis research. The binders used in this thesis research are PVAC paste and tapioca based paste with 4 variations of concentration. The analyses of the biomass pellets characteristic are density, compressive strength, proximate analysis (moisture, ash, volatile matter, and fixed carbon), calorific value, combustion rate, and gas chromatographic & mass spectroscopy (Pyr-GCMS). The result shows that OP-EFB biomass pellets are qualified to be considered as biomass pellets. The most effective OP-EFB biomass pellets is biomass pellets with 10% tapioca binder concentration. Keywords: Oil Palm Empty Fruit Bunches, Biomass, Biomass Pellets, Tapioca, PVAC.

#### DEDICATION

I dedicate this works first and foremost to Allah S.W.T.

To my mom and brother,

Yessi Bakhtiar and Atha Thoriq Aditya. for their love, kindness, and support. I also dedicate this to my family, friends and loved ones, without whom none of my success would be possible

## **SWISS GERMAN UNIVERSITY**

#### ACKNOWLEDGEMENTS

First of all, I would to express my gratitude to Allah S.W.T for His blessings and guidance. I would like to extend my sincere thanks to:

- 1. My advisor, Dr, -Ing Evita H. Legowo for her assistance of continuous guidance, support, advices and motivation during my thesis period
- 2. My co-advisor, Dr. Saptadi Darmawan, S.Hut, M.Si for his great help, support, and guidance
- 3. My beloved mother, Ir. Yessi Bakhtiar, M.M. for her love and support both morally and financially during my study and my life.
- 4. PT. AANE for the great assistance and opportunity given to visit the palm oil industry site.
- To all of the people in Indonesian Research for Agricultural and Engineering, Serpong for their cooperation

6. To all of the people in Forest Product Research and Development Center, Gunung Batu, Bogor) for their guidance and support.

- My Partner, Meli, who gave her continuous support and encouragement to finish my thesis work
- 8. My beloved family for the blessing, love and moral support and also to my friends.
- 9. All of my friends from Faculty of Life Sciences Technology for their company and support during last four years
- 10. To other people that I could not mention one by one, all of whom have been there at least part of time and have been tolerant.

SM
