STATEMENT BY THE AUTHOR

I hereby declare that this submission is my own work and to the best of my knowledge, it contains no material previously published or written by another person, nor material which to a substantial extent has been accepted for the award of any other degree or diploma at any educational institution, except where due acknowledgement is made in the thesis.

ACKNOWLEDGMENTS

First, I would like to thank God for His blessings, guidance and protection upon me throughout the whole research work and thesis preparation.

In this opportunity, I would also like to thank Dr. rer. nat. Maruli Pandjaitan, the Dean of Life Science in SGU and also the co-advisor of this thesis work, and Dr. Bernadetta Kwintiana Ane, the advisor of this thesis work, for their ideas and inputs that played a big part in the completion of this thesis.

I would also like to give a special thanks to my friend, Henry Kho the Great, for his great generosity and great programming skill has been a great help for the completion of this thesis.

Thank you to my family for their comfort and endless support. Lots of thank is also addressed to all my friends in SGU for the wonderful memories for the last four years and their supports during my study at SGU.

Last but not least, I would like to thank SGU for the opportunity to work on the research of cervical cancer detection.

Cervical cancer is the most common type of cancer in women throughout the world. This cancer is largely preventable through screening during its early stages and appropriate treatment. The effective screening test for detecting pre-malignant cells in uterine cervix before the progress into cancer is called Pap smear.

Pap smear using Papanicolau staining method emphasizes the different components of the cells with specific colors. Available cell features like morphology, shape and color of nucleus and cytoplasm are used for the classification of Pap smear image into normal and abnormal cells.

However, the screening which is done manually by the cytologist was inefficient and time consuming. It requires high skill and experiences of the cytologists. This requirement reads to a condition that the diagnosis inherently prone to the human error. Coping with this problem, this research is to introduce an automated diagnosis

algorithm for early detection of cervix cancer. The diagnosis algorithm is developed to recognize pattern on 2-dimensional digital cervical cytological image produced from Pap smear test. Pattern recognition is applied to variables of cell morphology and color intensity. Afterwards, measurement and identification of cells into normal and abnormal class is done on the basis of parameters color intensity, N/C ratio, and 2D wavelet approximation coefficients.

The automated diagnosis algorithm is intended to improve reliability as well as reduce time consumption in the conventional diagnosis of cervix cancer. Therefore, this will produce more accurate, faster and less expensive analysis of Pap smear test, which can be used to provide better health service for public community.

List of Figures	11
List of Tables	14
CHAPTER 1 – INTRODUCTION	15
1.1 Background	15
1.2 Research Problems	17
1.3 Research Objective	17
1.4 Benefits of Research	17
1.4.1 Public community	17
1.4.2 Medical community	18
1.4.3 Academic community	18
1.5 Research Assumption and Constraints	18
1.5.1 Assumption	18
1.5.2 Constraints	18
1.6 Methodology	18
1.6.1 Literature study	18
1.6.2 Image processing	18
1.6.3 Feature extraction	19
1.6.4 Pattern recognition	19
1.6.5 Classification	19
1.6.6 Result visualization	19
1.6.7 Process automation	19
1.7. Organization of Thesis	19
1.7.1. Chapter 1 – Introduction	19
1.7.2. Chapter 2 – Literature Study	20
1.7.3. Chapter 3 – Methodology	20

	Page
1.7.4. Chapter 4 – Research Findings and Analysis	20
1.7.5. Chapter 5 – Conclusion and Recommendation	20
CHAPTER 2 - LITERATURE STUDY	21
2.1 Cervical Cancer	21
2.2 Pap Smear Test	23
2.3 Cervical Cells	24
2.4 Image Acquisition	25
2.4.1 Image acquisition using sensor arrays	25
2.4.2 Acquiring standardized images	26
2.4.3 Capturing digitized images from video signal	26
2.5 Image Processing	26
2.5.1 Image enhancement	27
2.5.1.1 Contrast stretching	28
2.5.1.2 Histogram processing	29
2.5.2 Image filtering	29
2.5.3 Image segmentation	30
2.5.2.1 Edge detection	31
2.5.2.2 Thresholding	32
2.6. Feature Extraction	33
2.7. Pattern Recognition	33
2.8. Wavelet	34
2.8.1 Wavelet transform	35
2.8.2 Wavelet families	36
2.9 Classification	36
2.9.1 k-Nearest Neighbor (k-NN) classifier algorithm	37
2.9.2 Support Vector Machine (SVM) classifier algorithm	40
2.9.3 Naïve Bayes (NB) classifier algorithm	43
CHAPTER 3 – METHODOLOGY	46
3.1 Image Acquisition	47
3.1.1 Preparation of cervix cells specimen	48
3.1.2 Preparation of digital imaging devices	48

	Page
3.1.3 Acquisition of digital cervix cell images	50
3.1.3.1 Specimen visualization	50
3.1.3.2 Digital cervix cell image acquisition	50
3.1.3.3 Digital cervix cells image archiving	51
3.2 Image Processing	51
3.2.1 Image retrieval and conversion	52
3.2.2 Image enhancement	52
3.2.3 Image segmentation	55
3.2.4 Image filtering	57
3.2.4.1 Image erosion	58
3.2.4.2 Image reconstruction	59
3.3 Feature Extraction	59
3.3.1 Determination of the required features	59
3.3.2 Extraction of the required features	60
3.4 Pattern Recognition	62
3.4.1 Observation and analysis of unique patterns	62
3.4.2 Comparison and confirmation of the patterns	65
3.4.3 Removal of all misleading factors in the patterns	68
3.4.4 Conversion of patterns into classifiable variables	70
3.4.5 Labeling of the attributes	73
3.4.6 Establishment of training database	74
3.5 Classification	74
3.5.1 Selection of appropriate classification algorithm	75
3.5.2 Setting of chosen classification algorithms	78
3.5.3 Cross validation of the classification results	79
3.5.4 Classification of the observed cells into groups	80
3.5.4.1 k-Nearest Neighbor classification algorithm	81
3.5.4.2 Support Vector Machine classification algorithm	81
3.5.4.3 Naïve Bayes classification algorithm	82
3.6 Result Visualization	83
3.6.1 Visualization of diagnostic images	83
3.6.2 Visualization of diagnostic graphs and histograms	84
3.6.3 Visualization of diagnostic pattern values	85

	Page
3.6.4 Visualization of observed cell's classification results	85
3.7 Process Automation	86
3.7.1 Formulation of the workflow of the whole proces	86
3.7.2 Encoding of the system with programming language	86
3.7.3 Construction of a user interactive GUI	87
3.7.4 Test-running of the prototyped software	88
CHAPTER 4 – RESEARCH FINDINGS AND ANALYSIS	89
4.1 Findings in Pattern Recognition	89
4.1.1 Pattern recognition based on color intensity	89
4.1.2 Pattern recognition based on N/C ratio	91
4.1.3 Pattern recognition based on wavelet characteristics	93
4.1.4 Pattern values trend of normal cells	96
4.1.4.1 Normal cell color intensity pattern values	97
4.1.4.2 Normal cell N/C ratio pattern values	97
4.1.4.3 Normal cell wavelet characteristics pattern values	98
4.1.5 Pattern values trend of cancerous cells	99
4.1.5.1 Cancerous cell color intensity pattern values	99
4.1.5.2 Cancerous cell N/C ratio pattern values	100
4.1.5.3 Cancerous cell wavelet characteristics pattern values	100
4.2 Findings in Classification	101
4.2.1 Training database cross validation benchmarking results	101
CHAPTER 5 – CONCLUSION AND RECOMMENDATION	104
5.1 Conclusion	104
5.1.1 Attributes of normal cells	104
5.1.1.1 Based on conventional procedure	104
5.1.1.2 Based on automated procedure	104
5.1.2 Attributes of cancerous cells	105
5.1.2.1 Based on conventional procedure	105
5.1.2.2 Based on automated procedure	105
5.1.3 Advantages and disadvantages of conventional procedure	106
5.1.3.1 Advantages	106

	Page
5.1.3.2 Disadvantages	106
5.1.4 Advantages and disadvantages of automated procedure	107
5.1.4.1 Advantages	107
5.1.4.2 Disadvantages	108
5.2 Recommendation	108
